Portfolio Introduction

About me

My name is Rafael Jeronymo, and I am looking forward to joining your team as an intern data scientist. I'm currently enrolled in MBA-Data Science at Southeastern University where I have been learning and applying data science concepts for the last 15 months. I am now able to understand how Python coding works and how to analyze data using multiples libraries such as Numpy, Panda, Matplotlib and Seaborn, and I have also learned the initial concepts of machine learning. I have a Degree in Industrial Engineering where I learned and developed statistical skills to improve processes. Also, I have more than 15 years of work experience and I have worked for industries such as beef producing, oil and gas, construction and education. In all of them, data analysis was part of the job. From simple internal analysis to stakeholder reports, I have been working on my communication skills and hot to present clear and concise information, which is valuable in data science.
